The Roadmap

The items you see on the roadmap are the **tasks, projects,** or **initiatives** that you’re planning to accomplish. Items are organized on your roadmap by the details that you give them - we call these “Headers”.

---

**1 Items**

The items you see on the roadmap are the **tasks, projects,** or **initiatives** that you’re planning to accomplish. Items are organized on your roadmap by the details that you give them - we call these “Headers”.

**2 Headers**

This is one of your roadmap Headers - Headers are used to filter your items so that you can control how your items are displayed on your roadmap. When we make headers in the Items table, we call them “**Fields**”.

---
Items Table

The Items Table is the backend of your roadmap. It includes all of the tasks that you plan to deliver and their details.

**Fields** are the column headers of the Items Table. We use Fields for two purposes:

- To give our Items rich information
- As roadmap headers to filter Items for different visualizations

Creating Items

There are a few ways to create a new Item:

- Click between rows
- Click "Add new item" at the bottom of the table
- Click the "+ Item" button at top right of the screen
- Press “Enter” after manually entering an Item

Creating Fields

To create a new field click on the “+” located to the right of the very last field on your Item table. This will open up the Field creation modal. In order to create a Field you need three things:

- Field name
- Data type
- Values
**Editing Items in the Items Table**

There are two ways to edit an Item in the Items table:

1. Change the individual field value of the item that you want to change, or
2. Click on the Item name - this will open up the Item details modal where you can change multiple fields, add Item description, and leave comments.

**Editing Fields in the Items Table**

![Field Editing Interface]

In order to edit a Field that is already created, hover over the Field. To the left of the Field name, click on the icon to edit the Field name, data type, or value or delete the Field entirely. This will permanently delete the Field.

**Editing Items & Fields in the Roadmap View**

When reviewing your roadmap with a manager, peer, or customer you may receive feedback that changes certain items.

You can change the details (or Field values) of individual items by clicking an item on the roadmap which will open up the Item details modal. Here you can change field values, set a description, or leave comments.

Additionally, if the field you want to change is set as the header for the roadmap you can drag-and-drop the item into the new header. This also works with changing dates when you’re in timeline views.
The Format Panel

The Format Panel is the central location for making your Roadmap organized. It is located on the right side of the nav bar. If you want to control how your items are displayed, you can make those customizations here.

Changing Headers

Headers are the top level of organization for your roadmap. They come from the Fields you create in your items table. The values of your Fields become the titles of the headers, as shown on the right.

To change a header open up the format panel and go to the “Layout” section. Select the field you want as your header in the dropdown menu below.

Additionally, toggle “Hide empty headers” to clean up your roadmap.
Colors

Click on the “Colors” tab in the format pannel. Here you can customize the color palette of your roadmap. Colors help to visually organize your data making your roadmap easier to understand.

Changing Colors

Colors are assigned based on a field of your choosing. This can be an opportunity to add additional information through color.

To change a color select a Field in the drop down menu called “Color By”. It is recommended to select a field that is a header or subheader.

You can pick from the three pre-made color palette options or you can customize your own. You can even make a palette for your brand. This is a paid feature, you may want to book a meeting with an account executive to discuss.

Exporting your Roadmap

To export and share with others, click the Export function ( ). There are multiple ways to share and export your roadmap including PNG, HTML (embedable), Shareable URL, and CSV.

Choose your desired method and when you’re ready to publish, click the big blue “Publish” button in the bottom right.
